

In both of the cases below, I have controls for entering the moderator's name and option password. The uses cases earlier in this document mean this really should be done in an earlier screen, in some connection phase. I didn't remove them yet from here though.

Here is the closed event, and the moderator has the controls to enter the choices (one more remains). We can disable the submit button until 4 entries are input (preferred) or if the moderator attempts to submit with 3 entries or less, we put up an error dialog (more work for us and end user, not preferred)

The screenshot shows a Windows-style dialog box titled "Decision Line - Create New Event". It contains the following fields and controls:

- Moderator:** A text box containing "Bob".
- Password(optional):** A text box containing "****".
- Event Type:** Two radio buttons: "Open Event" (unselected) and "Closed Event" (selected).
- User Choice Mode:** Two radio buttons: "Round Robin" (selected) and "Asynch" (unselected).
- Number of Choices:** A text box containing "4" and a small "x" button.
- Number of Rounds:** A text box containing "3" and a small "x" button.
- Event Question:** A text box containing "What juice should I purchase for breakfast?".
- Current Choices:** A list box containing "Orange", "Apple", and "Mango Tango".
- Buttons:** "Submit" and "Cancel" at the bottom.

Handwritten red annotations include:

- A circle around the "Moderator" and "Password(optional)" fields.
- A circle around the "Event Type" and "User Choice Mode" sections.
- A circle around the "Number of Choices" and "Number of Rounds" fields.
- A circle around the "Event Question" field.
- A circle around the "Current Choices" list box.
- A red arrow pointing from the "Submit" button to the text "What is Next From" below the dialog.
- A red arrow pointing from the "Event Question" field to the text "Type in with" on the left.
